

duplicat™

The Duplicat 'lifesaver' option helps extend the life of plasmas, projectors and other displays by enabling them to be centrally switched-off when not needed. Lifesaver adds a downstream RS-232 control channel to the cat.5/6 cable - alongside high quality SXGA video and audio - to distances of up to 220m.

key features

- extended life** - significantly extend the life of expensive displays by automatically switching them off when not needed.
- RS-232 control** - commands from a PC or RS-232 AV controller are relayed through UTP cable alongside SXGA video & stereo audio
- independent control** - any display can be addressed and controlled individually - even through a distribution amplifier
- pin-sharp** - sharp edges and a notable absence of 'smearing' artifacts to 1600 x 1200 pixels
- long distance** - 220 metres of cable at 1280 x 1024 pixels - with high fidelity audio and video
- line-powered** - receive units can be line -powered
- digital stereo audio** - 24-bit stereo digital audio transmission is offered as standard with lifesaver variants (analogue in, analogue out)

19" rack-mounted distribution amplifier (DA) products can also support lifesaver technology as well as point-point links. All screens are individually addressable - even with DA's.

Duplicat lifesaver product selector June 2003			
	standalone with audio	19" rack with audio	Rx unit (150m)
1-way (pt-pt)	T-1A-LS		R-150A-LS
8-way		DA-08A-LS-19	R-150A-LS
16-way (8+8)		DA-16A-LS-19	R-150A-LS
